# SC7372E™ brand

140,000/UNIT

**MATURITY:** 3.7

**KEY FEATURES:**

- Medium-short plant height
- Good standability
- Good tolerance to charcoal rot
- Very good tolerance to frogeye leaf spot
- No Phytophthora gene
- Avoids fields with history of white mold

| Agronomics | |
|---|---|
| Field Emergence | 8 |
| Plant Height | 4 |
| Canopy Width | 5 |
| Harvest Standability | 7 |
| Shattering Resistance | |
| Growth Habit | IND |

| Flower Color | W |
| Pubescence Color | T |
| Hila Color | BR |
| Pod Color | BR |

Herbicide tolerances: 2,4-D choline in Enlist™ herbicides, glyphosate and glufosinate.

Enlist One® and Enlist Duo® are the 2,4-D herbicides for use with Enlist E3™ beans:

- Use Enlist One® or Enlist Duo® herbicide for excellent weed control
- Enlist One® and Enlist Duo® herbicide are labeled for use with Enlist E3™ soybeans
- Enlist One® and Enlist Duo® herbicide are the only 2,4-D herbicides labeled for use with Enlist E3™ soybeans
- Can apply Enlist One® or Enlist Duo® herbicide from burndown through R2 stage
- No plant-back restrictions following burndown with Enlist™ herbicides
- Control broadleaf weeds with 2,4-D choline in Enlist One® and Enlist Duo® herbicide

| AGRONOMIC RATINGS KEY: | | EAR TYPE: | SOIL TYPE: |
|---|---|---|---|
| 9 – Best | T – Tall | Flex – Flex Ear | X – Recommended |
| 1 – Worst | H - High | Det – Determinant | Blank – Not Recommended |
| S – Short | - – Not Rated | Semi – Semi-Flex | |
| M – Medium | | | |

## NITROGEN CLASSIFICATION:

Category 1 Hybrids - flower early for maturity, flourish in a weed and feed program; derive less benefit from side dress applications of N; do relatively well at moderate N rates.

Category 3 Hybrids - flower somewhat later; longer grain fill; take up N over a longer period; and derive the most benefit from side dress applications of N as well as higher N rates

Category 2 Hybrids - are somewhere in between

IMPORTANT: Trait rating scores provide key information useful in selecting and managing products in your area. Information and ratings are based on comparisons with other products sold by SCI. Information and scores are assigned by SCI and are based on period-of-years testing through 2020 harvest and were the latest available at time of printing. Some scores may change after 2021 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions and a wide range of both climate and soil types and may not predict future results. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision.

**Agrisure®, Viptera®, Agrisure Artesian® and Artesian™** are trademarks of, and used under license from, a Syngenta Group Company. Agrisure® technology incorporated into these seeds is commercialized under a license from Syngenta Crop Protection AG.

**Herculex®** Insect Protection technology by Dow AgroSciences and Pioneer.

**Liberty®, LibertyLink®** and the **Water Droplet Design** are trademarks of BASF. Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, postemergent weed control of Liberty® herbicide for optimum yield and excellent weed control.

**Roundup Ready®, YieldGard®** and the YieldGard® Corn Borer design are registered trademarks used under license from Monsanto Company.

**AM - Optimum® AcreMax® Insect Protection system with YGCB, HX1, LL, RR2**. Contains a single-bag integrated refuge solution for above-ground insects.

**AMX - Optimum® AcreMax® Xtra Insect Protection system with YGCB, HXX, LL, RR2**. Contains a single-bag integrated refuge solution for above- and below-ground insects.

**AMXT (Optimum® AcreMax® XTreme)** - Contains a single-bag integrated refuge solution for above- and below-ground insects. The major component contains the Agrisure® RW trait, the YieldGard® Corn Borer gene, and the Herculex® XTRA genes.

**In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax, Optimum AcreMax Xtra and Optimum AcreMax XTreme products.**

**YGCB, HX1, LL, RR2 (Optimum® Intrasect®)** - Contains a Bt trait and Herculex® I gene for resistance to corn borer.

Product performance in water-limited environments is variable and depends on many factors such as the severity and timing of moisture deficiency, heat stress, soil type, management practices and environmental stress as well as disease and pest pressures. All hybrids may exhibit reduced yield under water and heat stress. Individual results may vary.

**Qrome®** products are approved for cultivation in the U.S. and Canada. They have also received approval in a number of importing countries, most recently China. For additional information about the status of regulatory authorizations, visit http://www.biotradestatus.com/
